Kochavim on your phone · as an app

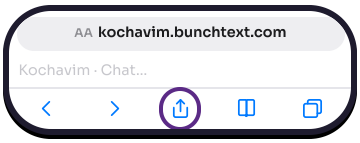

iPhone and Android · two minutes, no app store

powered by BunchText

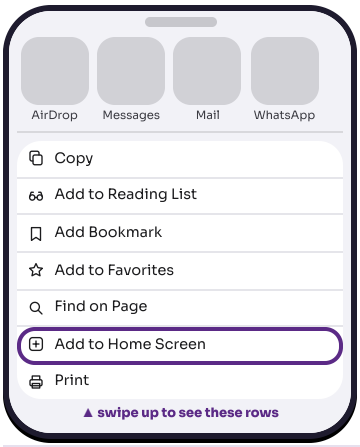

The chat lives at **kochavim.bunchtext.com**. Put it on your home screen once and it opens like any app, with a badge for unread messages and a buzz when the group posts.

1 iPhone · Safari

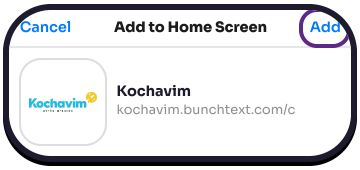

Open **Safari** (it has to be Safari, not a link inside WhatsApp or Mail), go to **kochavim.bunchtext.com**, tap **Members · Open the chat** and sign in with your mobile number or email. Then tap **Share** at the bottom, the square with the arrow.

The sheet opens. **Swipe up** on it to see more rows, past Copy and Add Bookmark, and tap **Add to Home Screen**.

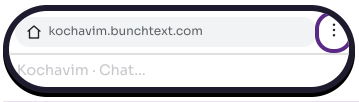

Tap **Add** at the top right. Done.

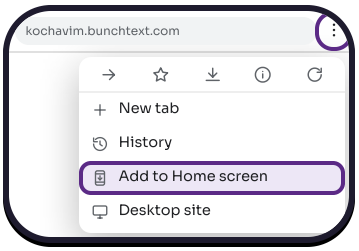

2 Android · Chrome

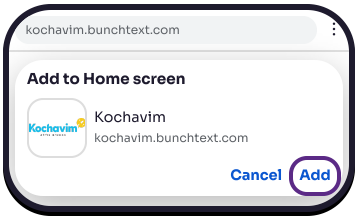

Open **Chrome**, go to **kochavim.bunchtext.com**, tap **Members · Open the chat** and sign in with your mobile number or email. Then tap the **three dots** at the top right.

Tap **Add to Home screen**. Some phones say **Install app** instead; same thing.

Tap **Add**. Done.

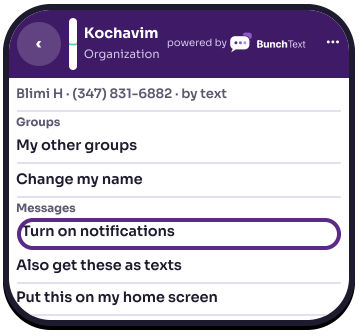

3 Then, on both

A **Kochavim** icon is on your home screen. From now on open it from **that icon**, not from the browser. The red badge counts messages you haven't read.

Inside the app tap the **three dots** at the top right, then **Turn on notifications** and **Allow**. You get a buzz when the group posts, and the texts stop on their own. Want the texts back? Same menu, **Also get these as texts**.

The app can walk you through it too: a line at the top of the chat says "Want a buzz when the group posts? Show me how". Tap it and it shows these steps for your phone.

Stuck? Text the Kochavim number and the office will help
